

Procenter Prasonisi - Board Range 2010

| Board Type | Description |
|---|---|
|  | <p>FUNSTER 160 180 205</p> <p>The Funsters combine the performance of a freerider with the easy handling of a beginner board. They are excellent beginner and family boards.</p> |
|  | <p>FUN RIDE 130 145 160</p> <p>They fulfill what their name promises - no other boards are so easy to control while going fast and in jibes. They never get out of control even in overpowered conditions. Perfect, easy jibing boards which stay on a plane through any jibe. They work great for fast carving jibes as well as for basic beginner jibes. They begin to accelerate very early and when up to speed they are effortless to sail and reach very good speed.</p> |

|  | <p>X-CITE RIDE 100 110 120</p> <p>Their name describes them well - easy surfing, instant fun, high performance freeride boards. Anybody will enjoy them from short board beginners to sporty experts. The relative straight outline curve in the midsection delivers great control. Quite a lot of curve in the outline between the straps makes them easy to maneuver. High speed carving jibes, tight turns and changing the jibe radius comes naturally. The boards jump on the plane even with a passive sailing style, no pumping required!</p> |
|  | <p>SUPER SPORT 62 V100 65 V109 69 V118 74 V127</p> <p>Slalom-oriented with great planing and maneuver characteristics. They are super fast Freeride boards for advanced riders. They supply an aggressive, electric feeling and breathtaking acceleration – also in light winds. Lots of top-end control and great carving jibe abilities.</p> |

| Board Type | Description |
|---|--|
|  | <p>SLALOM VI 92l / 65l / 68l / 76l / 82l</p> <p>High speed, good control, easy handling (for Slalom boards). Serious racing machines for advanced and dedicated riders.</p> <p>On the smaller sizes control is the biggest factor to go really fast. That is why we used a bottom shape combining double concaves in the front with a flat V in the tail. This gives you great control and enables you to go superfast even when totally maxed out. The bigger sizes have a constant flat V throughout. This creates good lift and a very direct feeling which gets you planing in very light winds – even in the middle of the pack.</p> |
|  | <p>FREESTYLE 89 98 107</p> <p>Even top riders demand forgiving boards. A move might be radical but you still have to land it! That is the reason why we focus heavily on boards that are easy to sail all of the time and radical when you need them to be.</p> <p>The all new Ergo Deck positions your heel lower than your forefoot offering more feeling and sensitivity underfoot. The rider can instantly transfer his whole body weight from one rail to the other. This also results into extra pop and carving abilities. The board just explodes into the air in any direction you want, making fast powerful high altitude freestyle so much easier and stylish.</p> |

| Board Type | Description |
|---|---|
|  | <p>FREESTYLE WAVE 78 85 93 102</p> <p>The perfect All in One boards. They cover it all - bump and jump, freestyle and wave sailing. Easy enough for everybody but at the same time exciting for the experts. Loose enough to be classed as a wave board and balanced enough for big sail carrying capacity, probably the most versatile boards ever produced.</p> |
|  | <p>TWINSER WAVE 68 74 82</p> <p>The new Twinsers are so easy to turn, and now have the extra control in the turn to ride even more aggressive and committed. Nothing turns tighter than these boards. No matter how experienced you are your wave riding will reach a new level - guaranteed. You won't believe your own bottom turns and cut backs. The Twinsers shine in side on to side offshore conditions - if you mainly sail in onshore stuff consider the new Wave line.</p> |
